

Campus Alarms: Security Alarm Policy

Overview

The Security Alarm Policy provides direction on processes and responsibilities for Alarm installation, testing, and on-going maintenance.

Security Alarms enhance the safety of the campus community and its property. Types of Alarms include:

- Door Access control, such as entry/exit and door motion alarms
- Hold-up or Panic type alarms which are button or pendant activated

Alarms signals are transmitted to the local panel and then to Public Safety Dispatch. This allows for a proper deployment response. Security panels will be a stand-alone system not to be added into another panel type (i.e. Fire panel).

Requirements

All Security Alarm installations must comply with campus standards including:

- Approval by Cal Poly Public Safety (PS)
- Campus building procedures and code
- Signals communicate to PS dispatch
- Communication to Alarm receiver (via UDACT device)
- Alarms installed by a campus approved vendor

Request Process

Security alarms are requested by campus constituents who require the use of monitoring services. Requests are made to Public Safety who meets with the requestor to provide guidance on the proper application and usage of alarms. This includes discussion with the client whether an alarm is appropriate for placement based on needs.

Once approved by PS, the requestor will work with Facilities Management & Development to choose and work with an alarm vendor. FM&D works with the vendor, A&F Network and Technology Services (ANTS) and Information Technology Services (ITS) to install, program and test the new alarm.

Responsibilities of Public Safety (PS):

- Consult on Alarm usage and Purpose
- Maintain copy of Alarm points and current Department contact
- Security alarm policies and procedures (reference)

- Approve installation of security alarms

Responsibilities of Facilities Project Manager:

- Work with Alarm vendor, Department contact, ANTS Alarms on project scope
- Provide communication request to Campus IT
- Provide Work Order for ANTS Alarm team

Responsibilities of A&F Network Technology Services (ANTS) team:

- Communication with Facilities Project Manager on needs.
- Working with Alarm vendor on initial 100% alarm point testing from panel to PS.

Responsibilities of Information Technology Services (ITS):

- Provide panel communications (Networking or Phone).

Responsibilities of Alarm vendor:

- Contact ANTS Alarm team for initial 100% alarm point testing from panel to PS.
- Contact Department contact to arrange testing
