

Cal Poly SLO Github Standards Archive Update Instructions

These instructions are intended to help anyone to update the Github Campus Standards Archive. There's a lot of screenshots intended to make instructions more clear. I'd recommend installing Github desktop for a more intuitive and visual workflow, but I've included both methods.

Step 1: Open up the repository here:

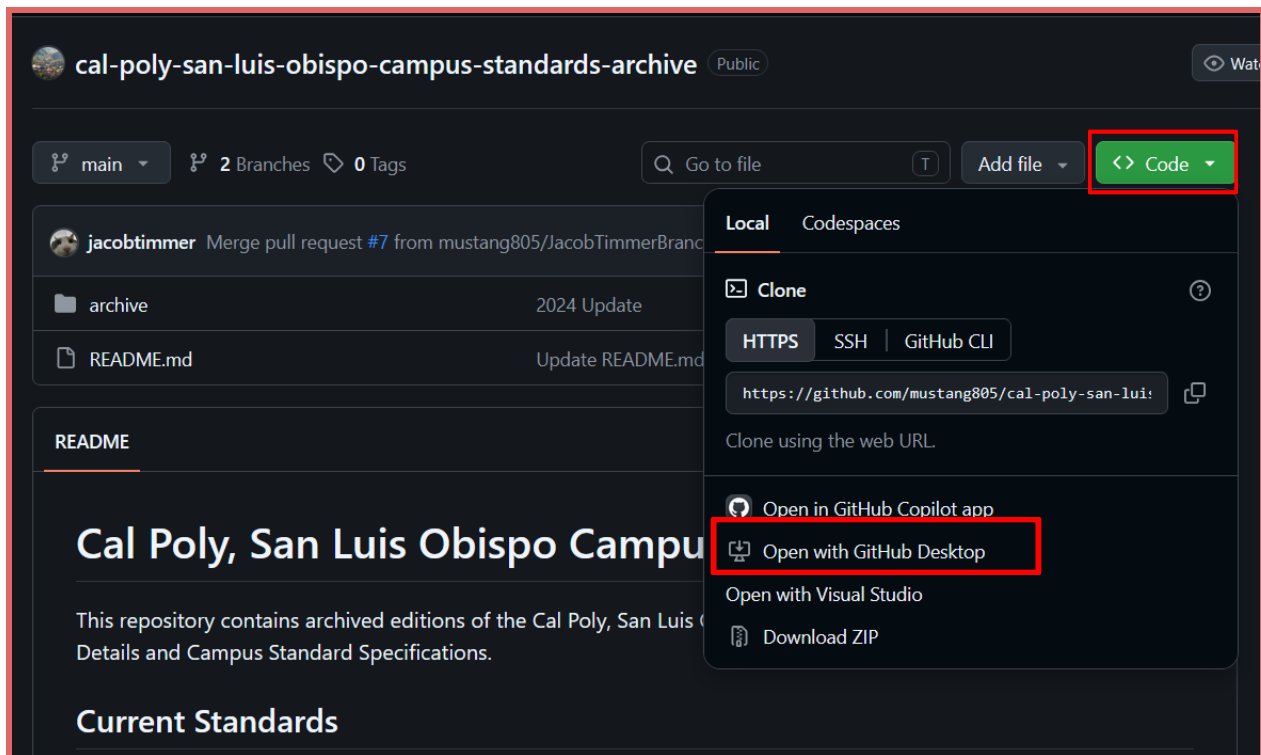

<https://github.com/mustang805/cal-poly-san-luis-obispo-campus-standards-archive>

Step 2: Clone the repository onto your computer. This downloads a local copy of the project. This will allow you to edit your copy, then upload it back to Github to make updates.

You can clone the repository in a number of ways. I prefer using Github desktop, but you can also use the command line interface.

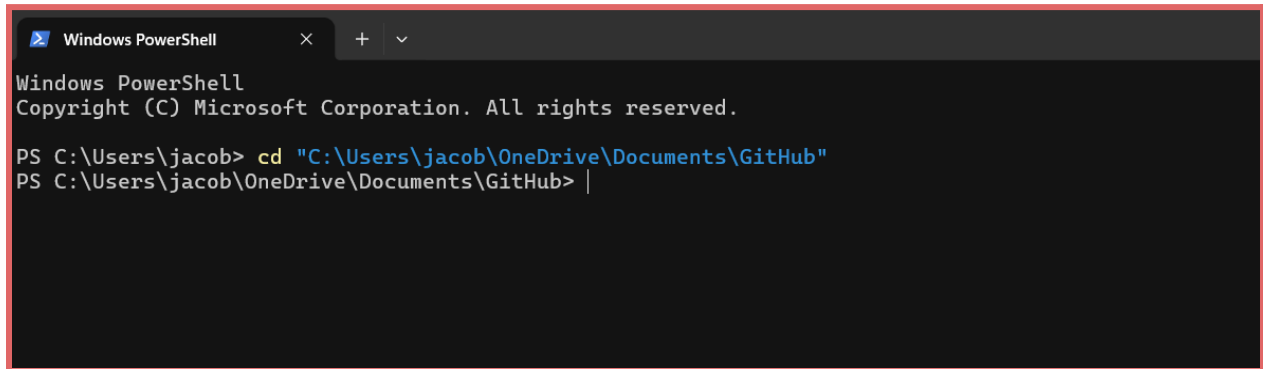

To clone using Github Desktop:

- Select the green '<> Code' button
- Select Open with Github Desktop
- Confirm.

To clone using Command Line Interface (CLI)

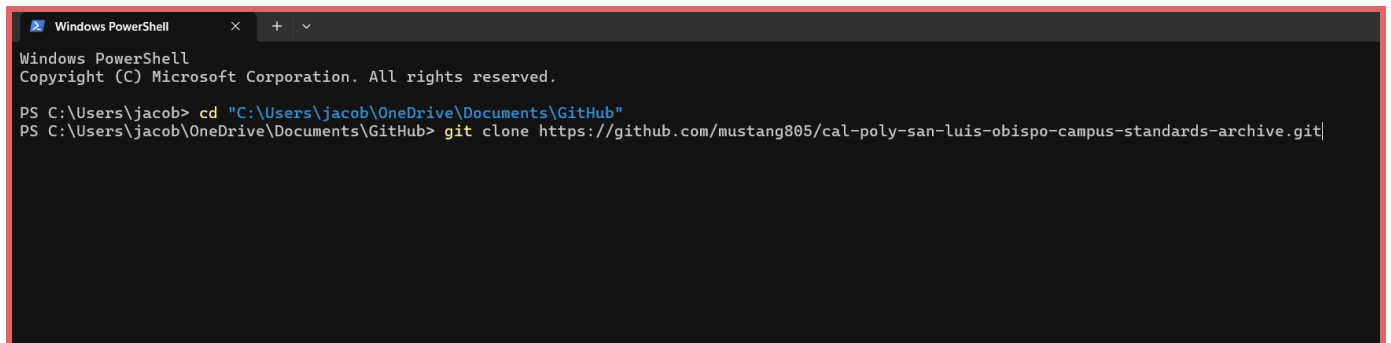

1. Select the green '<> Code' button
2. Copy the HTTPS link or SSH link
3. Launch your terminal. If you haven't used one before, try searching 'terminal' in your computer's app-search. Modern versions of Windows come with the Windows Terminal. There are other options, such as Git Bash or the command prompt system.
4. Navigate to the folder where you want the cloned directory to be. You can do this by using the 'cd' (change directory) command.

```
Windows PowerShell
Copyright (C) Microsoft Corporation. All rights reserved.

PS C:\Users\jacob> cd "C:\Users\jacob\OneDrive\Documents\GitHub"
PS C:\Users\jacob\OneDrive\Documents\GitHub> |
```

5. Clone into that folder using the copied link.

```
Windows PowerShell
Copyright (C) Microsoft Corporation. All rights reserved.

PS C:\Users\jacob> cd "C:\Users\jacob\OneDrive\Documents\GitHub"
PS C:\Users\jacob\OneDrive\Documents\GitHub> git clone https://github.com/mustang805/cal-poly-san-luis-obispo-campus-standards-archive.git
```

Step 3: Now you can navigate the folder system and make changes to the archive.

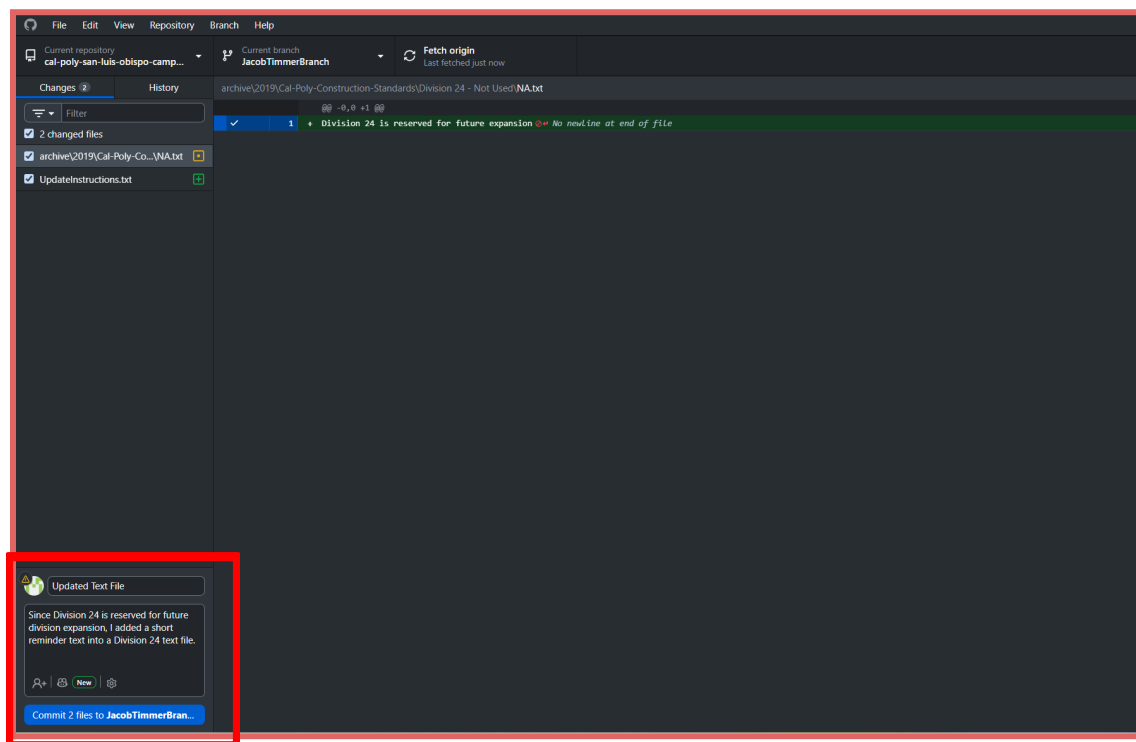

Name	Status	Date modified	Type	Size
.agents	✓	7/15/2026 12:22 PM	File folder	
.git	✓	7/27/2026 12:30 PM	File folder	
archive	✓	7/15/2026 3:16 PM	File folder	
README.md	✓	6/26/2026 10:30 AM	Markdown Source ...	1 KB

Step 4: Commit and Upload changes.

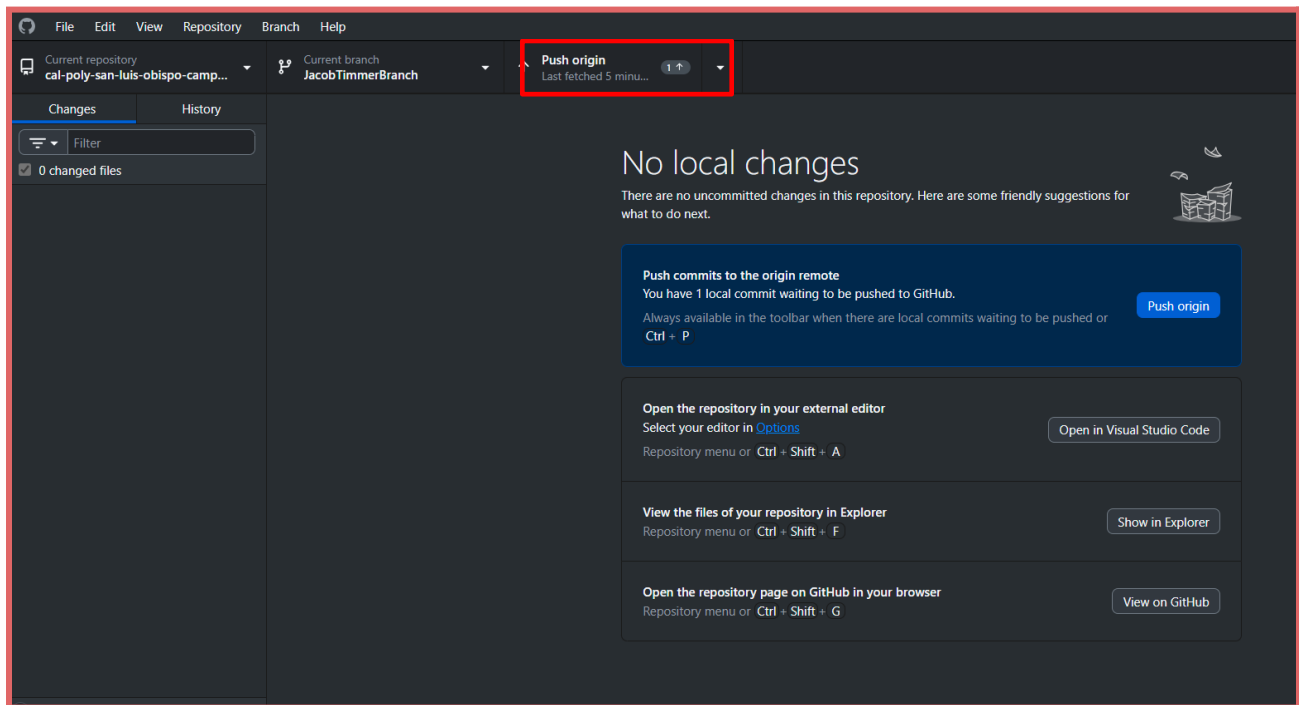

Now that you've made your updates, you need to upload the new archive to Github. Once again, the method of doing this will be different if you have or don't have Github Desktop.

To upload using Github Desktop:

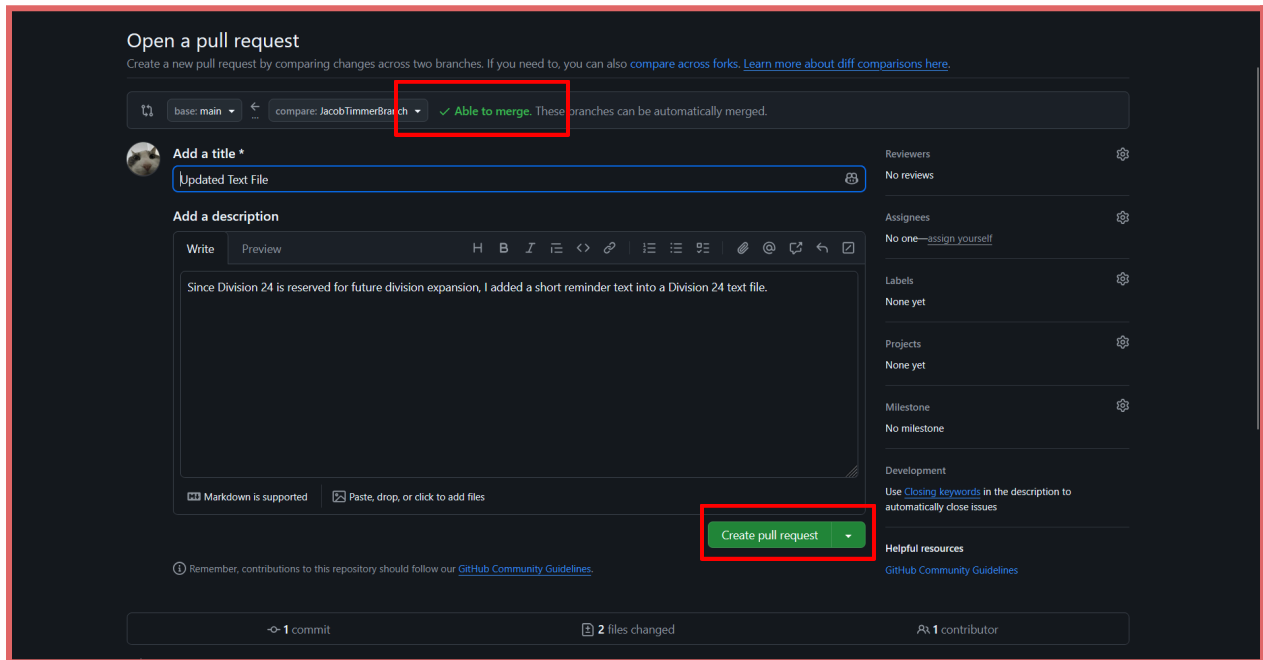

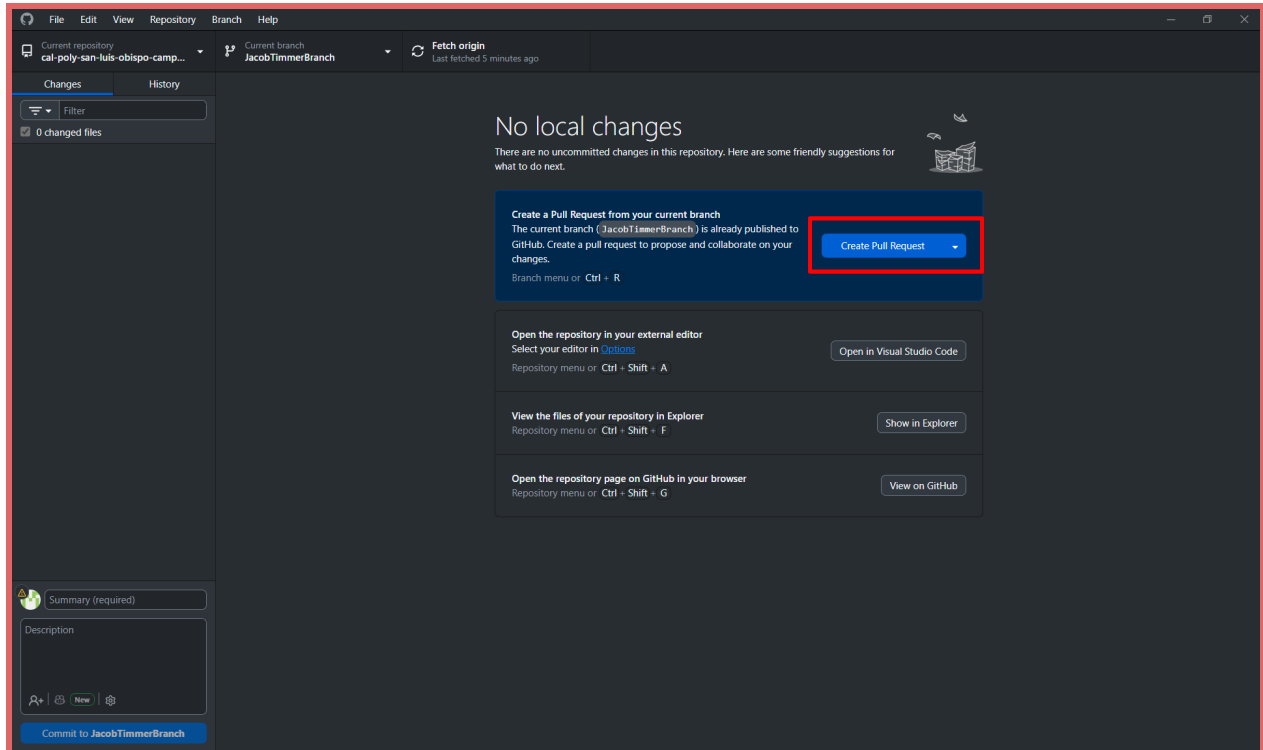

1. Commit Changes. Add a title and description that summarizes your changes to the bottom left section. Then select commit changes. This saves your changes locally on your computer.

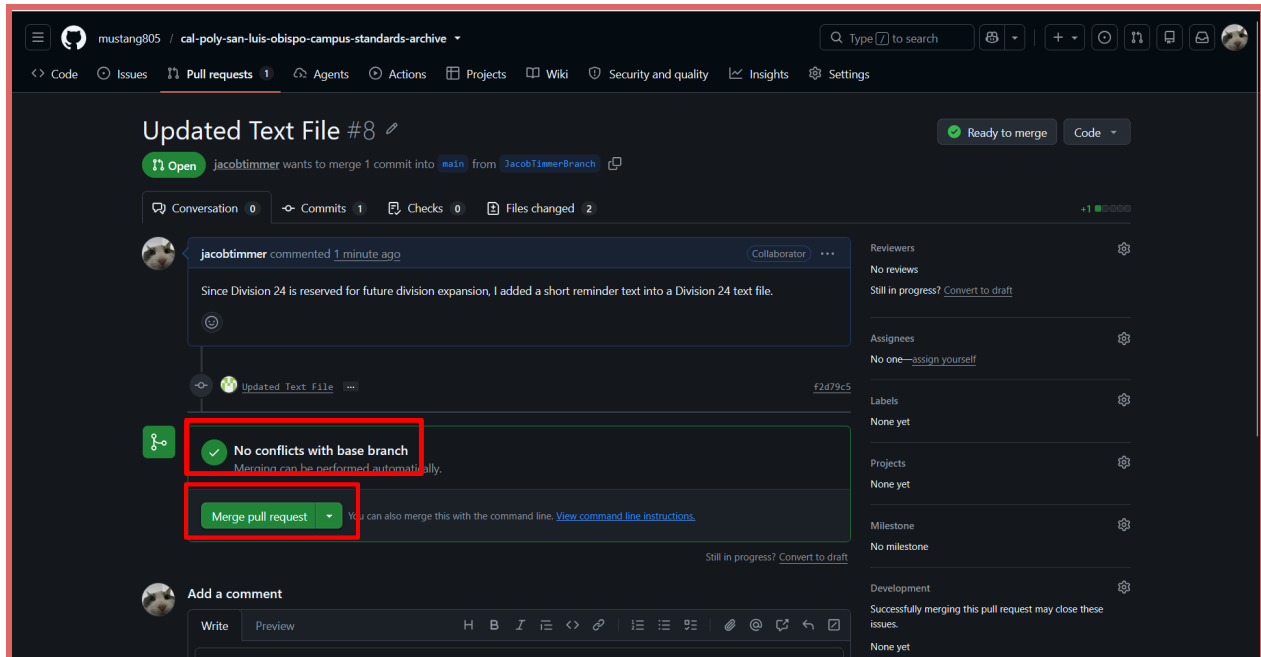

2. Push Origin. Now select push origin. This uploads your changes to Github's remote servers.

3. Create Pull Request (If you need). You only need to do this if you aren't working in the main branch. This is an extra step to merge your branch changes onto the main branch. Select the button, then it'll take you to the repository's online page, where you can merge the branches if there is a green **Able to merge** and later a green **No conflicts with base branch**. If there isn't, something went pretty wrong, and you'll have to fix that.

Then you're done! Check to see if your changes are successfully uploaded.

To upload using Command Line Interface (CLI) through the main branch:

1. Using the terminal, navigate to the root directory of the github project.
2. Then, enter 'git add .' This prepares all changes you've made to be committed
3. Then, commit your changes with a descriptive message by entering 'git commit -m "some message"'
4. Finally, push your changes to main using 'git push origin main' Then check to see if your changes were added.

Syntax:

```
cd "C:\Users\jacob\OneDrive\Documents\GitHub\cal-poly-san-luis-obispo-campus-standards-archive"
git add .
git commit -m "Your commit message"
git push origin main
```
